**Beautiful, Powerful, Efficient. That's it.**

## GEEKS'PHONE "ONE" IS DESIGNED WITH PEOPLE'S REAL NEEDS IN MIND

As a wise person said not much time ago: "in these times of economic uncertainty, only one thing remains constant: the need to innovate and look forward to the future". Geeks'Phone is a young company recently established in Madrid, Spain. We are different, we think different, our products are meant to be different. Current market is saturated, each week new handsets are released to the market, and this only helps to increase the insecurity which lies inside of each potential customer.

Being the first European brand introducing the innovative Android software platform on handsets, we have the chance of what we call "market refresh". That means, to sum up, that for the first time, an independent manufacturer has the chance of leading the "mobile revolution" that Android represents by itself. Our commitment is simple and easy to understand: bringing Smartphone era to the masses, integrating it with the "web 2.0" concepts and philosophy. Doesn't it sound nice?

**POWERFUL & EFFICIENT**  
ONE is a high-end Smartphone capable of delivering all the power needed to run any of the applications available right now and the ones of the upcoming years. With a powerful Intel®-Marvell PXA310 Processor (based on Intel XScale architecture), running at 624MHz, ONE will cover-by far-any task that is asked to perform.

**FAST & EASY TO USE**  
Featuring Android, Google's first Operating System, ONE is really easy to use, and every person should get used to it within few minutes given its natural intuitiveness.  
Geeks'Phone, in collaboration with mAPPn Ltd has developed a new user interface which makes usual tasks even easier and provides a new level of interactivity.

**ELEGANT & BEAUTIFUL**  
With its great design, based on the awarded Samsung Omnia i900 (under license), ONE fits perfectly either in a business atmosphere or in a more relaxed one. Not too big, not too small, with its well defined lines and the full WQVGA Touchscreen...  
ONE is a phone meant to impress at first glance.
